# THE FACTORY TOUR

A

Spanning over 340,000 sq. ft. of manufacturing space the Texacraft facility continues to produce superior quality outdoor furnishings for the contract and hospitality markets. Thousands of square feet of space store truckloads of aluminum extrusions waiting to be bent, cut, welded and painted.

B

A host of machines that cut and bend the extrusions go to work forming the frames. Stacks upon stacks of cut extrusions make their way to the welding room where any one of 59 welding booths awaits the delivery.

C

Keeping abreast of the latest manufacturing technology helps us keep costs down while keeping the process lean and efficient. The addition of several robotic welders has proven this approach to be worthwhile. More robotic welding stations are being planned for.

D

Meanwhile, other departments in the factory are creating furniture components. Some of which include the aluminum stamping machine. This device takes blank aluminum sheets that are placed underneath a die that punches out patterns and shapes for our stamped table tops.

E

After receiving several washes, the frames are quick dried and enter the powder coating booths. The thick coating of polyester powder covers the raw aluminum with an extremely durable, protective finish coat.

F

From the washer, the furniture makes its way into the gas fired ovens where the powder coating melts and bakes onto the frames at more than 750 degrees Fahrenheit.

G

The upholstery department is another large part of the factory where thousands of bolts of fabric, stacks and rolls of foam and fiber are warehoused. Several large cutting tables cut the fabric from patterns in preparation for sewing at any one of the 40 sewing stations.

H

When completed, the furniture is inspected, securely wrapped for protection and placed into a heavy duty corrugated box for shipping. A newly installed box making machine makes boxes custom sized for each piece of furniture. A process that only takes seconds to complete.

I

The boxed furniture is labeled, put on a trailer and shipped to one of our many thousands of satisfied customers.

J

We take quality very seriously. We have our own in-house testing laboratory. This department has many different stations that test the quality of the paint, extrusions, vinyl, etc. Stress tests are also conducted to ensure the frames are strong enough to withstand commercial use.

K

Pride in Quality. That's what the more than 850 employees of Texacraft focus on every day. We thank you for your business.

## PREMIUM CUSHION OPTION

Multi-layered seat cushions from Texacraft are engineered to shed water and keep your cushions dry. Should the outer fabric allow water to penetrate, a specially engineered water barrier fabric, that is sealed around the inner foam and fiber, will redirect the water to exit the bottom of the cushion via an open mesh, sling fabric. A firmer foam is used to provide a fuller cushion appearance as well as prolong the life of the seat cushion. This Premium Cushion is an option on most collections and is designated with the model number suffix "P".

*Black, open Mesh Textilene fabric allows water to exit seat cushion*

*The cushion fabric frames the bottom mesh fabric to conceal it from view.*

## OYSTER WEAVE

Having the look and feel of real wicker, this proprietary weave creation was the result of dedicated time and effort. The material is a mix of polyethylene and UV inhibitors with no acrylic additives. Both the texture and coloration are achieved from the hands of an extrusion artist who intuitively adds the correct amount of pigment to the weave during precise temperature intervals in the production process. The weave coloration is infused throughout the core of the weave. The result is a beautiful, natural weathered weave material. All pieces of Coeur d'Alene are hand woven, strand by strand, by highly skilled artists. One chair can take more than a day to weave.

# ARRAY DAYBED

The Array Daybed requires some assembly. Assembly consists of one lower bed frame, 4 posts, one top canopy. The lower bed unit is fully welded. The four posts attach to the bed frame and to the top canopy with supplied stainless steel bolts. The top canopy is fully welded. The male post fittings provide a sturdy frame when assembled. The bed frame can be surface mounted.

**CUSHION DAYBED** Order the sling base and order cushion set M1304 or M1304P. When canopy is ordered **M31085CS**, you must also select a sling fabric for the SHADE as well. Canopy is only available in sling fabrics (woven vinyl fabrics). Frame is available in all frame finishes.

Fits with or without cushion

The side shades can be pulled up and totally out of the way by simply placing the tension rods in the double "U" brackets located in the top middle of the front and back of the top canopy.

If the canopy is not utilized end caps cover the four corner extrusions of the lower bed frame.

Double skate wheels on the back of lower bed frame allow easy mobility.

### Magnolia Cushion

Like all products from the Lagoon Collection, Magnolia is a product line made from 100% injection molded polypropylene material. The polypropylene panels look like real woven furniture, are extremely durable and easily kept clean. With Texacraft's comfortable and long-lasting cushions, you have a quality, 'woven look' ensemble at an attractive price. Because the cushions affix to the furniture frame, you have worry free exposure in windy conditions.

**Magnolia Cushion is only available with Premium cushion construction.**

# EURO FORM

The Euro Form Collection is created from either high quality, batch-dyed fiberglass/polypropylene resins or 100% polypropylene depending on model. These very tough materials include UV additives for outdoor exposure. The process of creating the frames involves "air moulding" technology which makes it possible to achieve closed shapes and guarantee a more hard-wearing and easy-to-clean product. These products are resistant to sunlight and atmospheric agents.

## ! IMPORTANT ORDERING INFORMATION

Some Euro Form items are stocked for quick shipment. Otherwise, special order items could take 6 weeks. Additionally, some items require minimum order quantities. Consult your sales representative for more information.

TexaWood is a line of environmentally friendly furniture utilizing 'lumber' made from recycled plastics. The TexaWood 'lumber' begins its transformation with the recycling of post-consumer bottle waste such as milk and detergent bottles and other post-industrial materials. The cleaned and decontaminated materials are compounded into pellets that are melted, molded and extruded into planks of plastic 'lumber' and are available in a host of natural and vibrant colors. By creating the 'lumber' from a single, purified polymer material, the eventual lumber is manufactured to an exacting, reproducible product ensuring uniform quality standards. The end product is a high-density polyethylene (HDPE) material that has the look and texture of real wood.

How does this material withstand the elements? Extremely well! The 'lumber' is tested in thousands of hours of UV and water scenarios with outstanding results. Although some slight color fading could occur during its service life it will be uniform in appearance. This excellent outdoor material needs no waterproofing, painting or staining to maintain its appearance.

Our Adirondack collections are made exclusively with this lumber material and assembled using stainless steel hardware. The Fresco collection incorporates a very heavy wall aluminum frame with planks of the TexaWood lumber. The planks are held in place with stainless steel hardware.

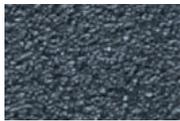

Texacraft's Fuse Collection (pages 104-105) is created from a similar HDPE product called MGP or Marine Grade Polymer. Like HDPE material, MGP is also derived from post-consumer bottle waste such as milk and detergent containers or other post-industrial materials. The main difference is that MGP is formed into large sheets, creating a smooth, uniform surface that is slightly heavier in comparison to HDPE lumber. Both HDPE and MGP are excellent all-weather materials that never require painting, staining, or waterproofing to maintain their appearance.

Texacraft's TexaWood collections are perfect for commercial use as they are extremely durable and need little maintenance. A simple wash with the hose will keep the furniture clean and looking good for years of outdoor enjoyment.

Connecting a table to a bench is a matter of aligning the tabs on the table with the holes underneath the bench frame and inserting bolts (fig. 1). Connecting benches together you will utilize an aluminum plate. Align the holes of the plate with the holes on the underside of each bench and insert bolts (fig. 2). Attaching benches together with the plates isn't necessary if the benches will be surface mounted.

Below are some possible configurations incorporating the connecting tables.  
 The use of benches with or without arms will not affect the configurations.

This modern style picnic table is 100% aluminum and is available in all finishes. The seats and top can be ordered in a different color than the base frame but the top and seats must be the same color if different from the base. The base is FULLY WELDED. Seats and top attach to the base with stainless steel hardware. This picnic table is ADA compliant as the ends of the picnic top will accommodate wheelchairs.

# FIBERGLASS PLANTERS AND CONTAINERS

Texacraft all weather planters and containers combine natural and synthetic materials to create lightweight, sculptural forms that can be used both OUTDOORS and INDOORS. Carefully made by hand, each piece is constructed from a fiberglass shell with a natural metal finish applied over the top. They are then hand polished to achieve a rich, dimensional surface that will either patina over time or take on a matte finish, depending on the salt content in the air. Most of these commercial grade containers are steel reinforced and are two to three times stronger compared to other manufacturers. The finishes are formulated with high UV and scratch resistant properties creating a very durable exterior fiberglass product.

The decorative "Nest" globe surrounds tempered glass panels. The glass provides wind protection for the flame and helps keep the burner and contents clean. This specially formulated glass does not get excessively hot to the touch.

Only available in Smoke (SM) finish as shown.

## NEST LANTERN

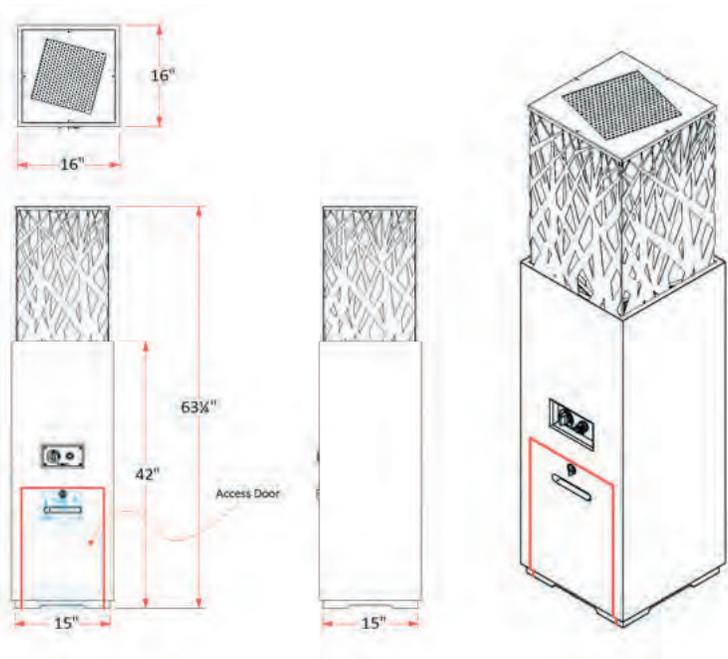

The Nest Lantern features a brushed stainless steel 'nest' pattern for the flame grill. The body of the lantern is made from glass fiber reinforced concrete (GFRC) in the Smoke finish color- a color resembling natural concrete. This unit is fueled by a self-contained Propane tank. The product is designed to use any standard 5 gallon propane tank available at most hardware stores or home improvement centers.

### Nest Lantern Features

- Operates on 5 lb. LP Tank (not included)
- Stainless Steel Burner, Hose and Regulator
- Flame is adjustable
- BTU Rating 20,000 LP
- Manual/Piezo Lighting
- Manual control valve
- Includes 7 lb. Bag of Black Glass

# EURO HEIGHT FIRE TABLES

Texacraft's beautifully designed fire tables feature a natural concrete finish and a contemporary "Euro-Height" of 13". This lower height offers a more casual ambience and places the flame well below eye level. Our units can be fueled by either Liquid Propane (LP) or Natural Gas (NG) and can easily be switched back and forth should your needs ever change.

- › Fire tables are designed to burn LP (Propane) or NG (Natural Gas)
- › All gas models ship as LP with a 10 foot hose and regulator
- › Simply connect to a standard 20lb LP tank to operate
- › Injector needed to convert burner to natural gas included
- › The conversion from LP to NG will take less than 2 minutes
- › Licensed plumber needed for Natural Gas installation
- › Tables have adjustable feet
- › Fluid Concrete Technology protects the concrete material from stains & weather
- › Composite material is 2x strength of normal concrete and ½ the weight
- › Stainless steel burners
- › Charcoal Glass included as decorative media
- › All tables ship with 2 bags of charcoal glass.
- › Each fire table in the collection is a 2 man lift.
- › Each unit fires 55000 BTU

## IN-POOL COLLECTION

### CUSHION SECTIONAL

Texacraft's In-Pool Cushion Sectional is an innovative way to introduce cushion comfort lounging without leaving the pool! The cushion foam is open cell and is created especially to quickly filter water for quick drying and is covered in durable Sunbrella Marine Grade fabrics. This versatile collection is also perfectly at home outside of the pool for poolside or veranda lounging.

Note: When used in-pool, water depth cannot exceed 10".

Back View

Cushions utilize Dry Fast foam which allows quick water flow through for quick drying. Underside mesh fabric aides in allowing water to pass and for the cushion to breathe.

When joining pieces for a modular configuration, an inner locking "Key" gangs the pieces together for a snug fit. The key is made of a marine grade, 3/4" polymer material for easy installation and removal.

# SUNSCREENS

Sunscreen Umbrellas are semi-permanent structures that are durable and can withstand harsh weather conditions. As with any non-permanent umbrella, awning or shade structure, they will need to be taken down when winds reach unsafe conditions. For areas that receive snow, we recommend removing and storing the Sunscreens in a dry, safe, protected environment.

Texacraft purchases the most durable electrostatic polyester powder available to cover the aluminum frames. This polyester powder is sprayed onto the frames which are then sent through a high temperature oven where the powder melts and bakes onto the frame. Combining such high quality finish components with Texacraft's extensive frame preparation process involving numerous cleaning cycles, the Texacraft finish will provide many years of worry free protection to the furniture frame.

Glides and end caps are not necessarily color matched to finish color. Black, White or Opaque glides and end caps may be used.

Photographs do not necessarily give the exact color representation of the actual frame finish.
